Welcome...

Welcome to our 2018 Geography catalogue featuring our latest and bestselling titles, expertly developed to support students, lecturers and researchers at every stage of their academic career.

Across textbooks, reference works, and journals, we aim to bring timely and authoritative resources to the academic community. The coverage of our textbook programme makes SAGE the perfect go-to when recommending texts to your students to inspire them to read deeply enough into, and widely enough around, your subject area.

Discover new ideas and tools for your next project, syllabus, or library, from practical study guides and undergraduate course companions to critical researcher-oriented titles. These cover an array of topics from spatial analytics and urban data science, to geodemographics, geographic concepts, theory, and sociology, as well as practical dissertation and field research manuals, and more.

We couldn’t fit everything in this catalogue, so be sure to browse our complete collection online at sagepub.co.uk/geography where most of our titles are available as ebooks, and a good many are available as an inspection copy if you’re teaching a relevant course. You can also follow us on Twitter: @SAGEGeography.

If you are interested in joining the list, as an author or editor, do get in touch with our Senior Publisher, Robert Rojek, who will be happy to discuss any potential projects.

We wish you every success in your academic journey in 2018!

DOING GLOBAL URBAN RESEARCH

Edited by John Harrison and Michael Hoyler Loughborough University

Whether you are an urban geographer, an urban sociologist or an urban political scientist, and whether you take a qualitative, quantitative or mixed methods approach, the challenge that confronts researchers of our increasingly ‘globalised’ urban studies remains fundamentally the same – how to make sense of urban complexity.

Doing Global Urban Research confronts this challenge by exploring the various methodological approaches for doing global urban research, including Comparative Urbanism, Social Network Analysis and Data Visualisation. With contributions from leading scholars across the world, this book offers a key forum to discuss how the practice of research can deepen our knowledge of globalised urbanisation.

GEOGRAPHY

History and Concepts
Fifth Edition

Arild Holt-Jensen University of Bergen

An accessible, definitive student introduction to geographical thought, this book takes a unique approach that encompasses environmental, historical and social perspectives. Now in its Fifth Edition, it includes new case studies, and revisions and updates throughout, with additional chapters expanding coverage of global subjects, poststructuralism, and the future of geography.

This text explores complex ideas in an intelligible and accessible style. Illustrated throughout with research examples and explanations in text boxes, questions for discussion at the end of each chapter and a concept glossary, this is the essential student companion to the discipline.

CONTENTS
What is Geography? / The Roots of Geography / From Cosmography to Institutionalized Discipline / The Regional Tradition / The Growth of Spatial Science / Paradigms and Revolutions / Positivism and its Critics / Alternatives to Spatial Science / Poststructuralism and Beyond / Geographical Tasks in a Globalizing World

March 2018 • 304 pages
Cloth (9781526440143) • £85.00
Paper (9781526440150) • £29.99
GEOGRAPHICAL INFORMATION SCIENCE AND AGENT-BASED MODELLING
A Practical Primer

Andrew Crooks George Mason University, Nicolas Malleson and Alison Heppenstall both at University of Leeds

This is the era of Big Data and computational social science. It is an era that requires tools which can do more than visualise data but also model the complex relation between data and human action and interaction. Agent-Based Models (ABM) computational models which simulate human action and interaction do just that.

This key text explains how to design and build ABM, and how to link the models to Geographical Information Systems. It guides the student from the basics through to constructing more complex models which work with data and human behaviour in a spatial context.

RESEARCH ETHICS FOR HUMAN GEOGRAPHY

A Handbook for Students

Edited by Helen F. Wilson University of Durham and Jonathan Darling University of Manchester

An essential resource, Research Ethics for Human Geography is an engaging introduction to key ethical issues in geographical research; edited and authored by leading figures in the discipline. It demonstrates why ethical consideration is a fundamental aspect of research practice and situates the unique dimensions of geographical research in the context of social research more broadly. The text addresses the wide range of ethical issues involved in collecting, analysing and writing up research across the social sciences; and explores and explains more specific ethical issues associated with different forms of geographical inquiry.

CONTENTS
Part I: A Theory of Ethics / Part II: The Basics / Ethics Procedures and Review / Positionality / Consent / Anonymity and Confidentiality / Sensitive Topics / Data Security / Statistics and Representation / Power and Empowerment / Working Overseas / Expectations and Responsibilities / Part III: Approaches / Participant Action Research / Radical Geographies, Feminism and Antiracism / Activist Geographies / Indigenous Methods / Part IV: Subjects / Vulnerable Subjects / Animal Geographies / Children’s Geographies / Historical Geographies and Archived Subjects / Part V: Spaces / Virtual Spaces and Social Media / Spaces of Disaster / Humanitarian Spaces / Voluntary Spaces / Part VI: Conclusion / Writing Research

AN INTRODUCTION TO R FOR SPATIAL ANALYSIS AND MAPPING

Second Edition

Chris Brunsdon *National University of Ireland, Maynooth* and Lex Comber *University of Leeds*

A new edition of the now standard text on using R for spatial analysis and digital mapping. This is an accessible and student-friendly ‘how to’ for anyone using R for the first time. The authors, once again, take readers from ‘zero to hero’, to enable practical R applications in GIS, spatial analyses, spatial statistics, mapping, and webscraping.

Revised and updated, each chapter includes example data and commands for exploring it; scripts and coding to exemplify specific functionality; self-contained exercises for students to work through; as well as embedded code within the descriptive text. The new edition includes detailed discussion of new and emerging packages within R like sf, ggplot, and tmap.

This is the introduction to the use of R for spatial statistical analysis, geocomputation, and GIS for all researchers - regardless of discipline - collecting and using data with location attached. The authors combine extensive expertise and practical experience with a clear and accessible pedagogic style. So for researchers using R the definitive ‘how to’ has become an essential go-to!

**CONTENTS**

Data and Plots / Handling Spatial Data / Programming in R / Using R as a GIS / Point Pattern Analysis / Spatial Attribute Analysis / Localised Spatial Analysis / R and Internet Data

**SPATIAL ANALYTICS AND GIS**

*online resources*

December 2018 •

*Cloth (9781526428493) • £90.00
Paper (9781526428509) • £32.99*
How has spatial analysis and mapping developed, and where is it headed in the next few years?

In recent years, mapping (it is all digital mapping now) has moved from a niche activity that used to be the sole preserve of geographers and related specialised subjects, to one that is common in many disciplines, across the physical, social and environmental sciences. What this has meant is that there are lots of people using and mapping spatial data, with an increasing need to analyse the spatial characteristics and patterns in the data. This is where special techniques for spatial analysis become relevant. The importance of these will only increase as the amount and variety of spatial data increases.

What’s new to this edition that you hope readers will find most useful?

The big changes since the first edition have been the new developments in spatial data formats, new tools and changes in thinking about graphics and data visualisation, and tools for undertaking spatial analysis. These have been largely driven by the team behind the ‘tidyverse’ collection of packages and those related to it (such as ‘dplyr’ and ‘ggplot2’). This has also been driven more recently by the new ‘simple features’ spatial data standard specified by the Open Geospatial Consortium and implemented in R via the ‘sf’ package.

What would be your top piece of advice to students new to R, looking to put theoretical knowledge into practice?

The easiest way to learn anything is to have a problem to solve. In the book we provide the data and code to a number of different types of spatial analysis, starting from simple data manipulations to very advanced spatial analyses. The easiest way for students and readers of the book to develop their skills is to play around with the code we provide - changing some of the parameters for example - and then to try to do a similar thing with some of their own data. Doing this will develop their understanding of R but will also give them greater ownership of the code they are implementing and will empower them to adapt the ideas here and carry out their own analyses.
VISUAL METHODOLOGIES
An Introduction to Researching with Visual Materials

Fourth Edition

Gillian Rose Open University

Now in its Fourth Edition, Visual Methodologies is a bestselling critical guide to the study and analysis of visual culture. Existing chapters have been fully updated to offer a rigorous examination and demonstration of an individual methodology in a clear and structured style. Reflecting changes in the way society consumes and creates its visual content, new features include:

• Brand new chapters dealing with social media platforms, the development of digital methods and the modern circulation and audiencing of research images
• More ‘Focus’ features covering interactive documentaries, digital storytelling and participant mapping
• A companion website featuring links to useful further resources relating to each chapter.

THE PREDICTIVE POSTCODE
The Geodemographic Classification of British Society

Richard Webber *OriginsInfo* and Roger Burrows *Newcastle University*

Geodemographic classification systems are one of the exemplar technologies of ‘commercial sociology’. This book is a detailed, empirical investigation into the question of whether academic social research can compete with the commercial sector, with its new technologies and big data, in order to classify, profile, and understand us. The book also explores questions of population profiling, classifying, and their consequences in the brave new world of ‘big data’.

Paper (9781526402349) • £24.99

*SAGE Research Methods* supports research at all levels by providing material to guide users through every step of the research process, from a quick dictionary definition, a case study example from a researcher in the field, a downloadable teaching dataset, a full-text title from the *Quantitative Applications in the Social Sciences* series, or a video tutorial showing research in action.

sageresearchmethods.com

Available as an inspection copy
Over recent years, the way that data are used to understand urban systems has changed dramatically. Cities are constantly adapting to incorporate new technology, and this has fast become a key tool to analysing how cities work. Urban Analytics offers a field-defining look at the challenges and opportunities of using new and emerging data to study contemporary and future cities through methods including GIS, Remote Sensing, Big Data and Geodemographics. Written in an accessible style and packed with illustrations and interviews from key urban analysts, this is a groundbreaking new textbook for students of urban planning, urban design and geography.

Spanning current and future cities, interviews with key urban analysts, reflective questions and technical case studies equip the reader with a greater understanding of theory and the technical skills needed for practice. This textbook also delves into the challenges and opportunities of using new and emerging forms of data to study cities. Topics explored include:

- Data and Urban Computing Infrastructure
- Sensors and Human Dynamics
- Urban Modelling
- Agent-Based Modelling
- Visualization and GIS

CONTENTS
Questioning the City through Urban Analytics / Sensing the City / Urban Data Infrastructure / Visualizing the City / Differences within Cities / Explaining the City / Generative Urban Systems / Cities as Networks and Flows / The Future of Urban Analytics

November 2017 • 200 pages
Cloth (9781473958623) • £85.00
Paper (9781473958630) • £27.99
What are some of the challenges and opportunities in using new forms of data to study cities?

New forms of urban data present significant opportunities for improved management of some essential urban functions like traffic management and maintenance. These operational things are important but somewhat mundane advancements. Things get exciting, and more challenging, when one tries to use these new forms of urban data to advance social equity, improve education, quality of life, and other core aspects of a healthy public realm. There are significant opportunities at the intersection of data and governance but models for how data best inform (and are informed by) these public processes are still emerging.

What is the main thing you hope readers will get from this book?

The focus of this book is learning by doing. We hope that through using data and computational methods to engage with real problems readers will not only acquire new (and valuable) skills, but also begin to inform their own opinions about the “challenge and opportunities” of new forms of urban data.

How do you see spatial and social studies as an interdisciplinary field of research developing in the next few years?

I don’t have a crystal ball, but it seems safe to predict that we will have more and faster data about cities in the future. But who owns these data and how they feed into governance (if at all) still seems like a difficult question to speculate upon. Whether urban data will become a business or a way for citizens to understand and shape their communities is anyone’s guess - it’ll probably be a bit of both.
URBAN STUDIES INSIDE-OUT
Theory, Method, Practice

Edited by Helga Leitner University of California, Jamie Peck University of British Columbia and Eric Sheppard University of California

This is a time of wide-ranging theoretical debate in Urban Studies, however the research practices that inform these theories have not received the same attention. This inventive and original text examines these foundational methodologies, with reference to different global sites and to recent debates around postcolonial, planetary, and provincialized Urban Studies. Not a method-as-techniques text as such, it shows the complex connections between theory, research design, empirical work, expositional style, and normative ethical commitments. This is unique contribution to the literature explicating the methodologies-as-practice which informs recent theories in Urban Studies.

THE DATA GAZE
Capitalism, Power and Perception

David Beer University of York

A significant new way of understanding contemporary capitalism is to understand the intensification and spread of data analytics. This text is about the powerful promises and visions that have led to the expansion of data analytics and data-led forms of social ordering. It is centrally concerned with examining the types of knowledge associated with data analytics and shows that how these analytics are envisioned is central to the emergence and prominence of data at various scales of social life.

This text aims to understand the powerful role of the data analytics industry and how this industry facilitates the spread and intensification of data-led processes. As such, The Data Gaze is concerned with understanding how data-led, data-driven and data-reliant forms of capitalism pervade organisational and everyday life. Using a clear theoretical approach derived from Foucault and critical data studies, the text develops the concept of the data gaze and shows how powerful and persuasive it is. It’s an essential and subversive guide to data analytics and data capitalism.

CONTENTS
Introducing the Data Gaze / Envisioning the Power of Data Analytics: The Data Imaginary / Perpetuating and Deploying a Rationality of Speed: The Temporality of the Data Gaze / The Infrastructural Dimensions of the Data Gaze: The Analytical Spaces of the Codified Clinic / The Diagnostic Eye: The Professional Gaze of the Data Analyst and the Data Engineer

SOCIETY AND SPACE

DIGITAL GEOGRAPHIES

Edited by James Ash University of Newcastle, Rob Kitchin NUI Maynooth and Agnieszka Leszczynski University of Auckland

Geography is experiencing a digital turn, with the ‘digital’ becoming both object and subject of geographical inquiry. Examining uneven geographies of infrastructures and production; geographies of digital media like the internet, games, the geoweb, social, locative and spatial media; digital devices – like computers, satellites, GPS, digital cameras, smartphones; as well software packages – like statistics programmes, spreadsheets, and GIS – this is a complete overview of geographic practice and scholarship. Digital Geographies offers an up-to-date account of how digital devices, logics, methods and aesthetics inform digital geography scholarship.

CONTENTS

December 2018 • 304 pages

MAKING MIGRANT IDENTITIES: THE BIOPOLITICS OF MIGRATION

Martina Tazzioli Swansea University

Making Migrant Identities uses migration to interrogate the vocabulary of contemporary political thought, to question sociological categories – like ‘population’; to examine the central role of humanitarianism; and to explain how borders are derived from selective monitoring and mapping technologies. The text equips readers with the theoretical and conceptual tools to understand migration governance, and offers a new political theory on the theme of multiplicity, collective subjects, and the production of individuals.

CONTENTS
Part I: Multiplicities and Singularities / The (Un)Making of Migrant Mobs / The Production of Migrant Singularities / Temporal Borders/ Temporalities of Control / Part II: Biopolitics Of/Through Mobility / Virtual Multiplicities/Singularities: Data Circulation and Circuits of Value / Governing Mobility Through Mobility. Migrant Dispersal and the Traps of Humanitarianism. / Part III: Politics of Visibility / Track, Store and Archive: Digital Multiplicities and Singularities / Migrant Spatial Disobediences

SURVEILLANCE AND SPACE

Francisco Klauser Université de Neuchatel

Considering the possibility of a ‘political geography of surveillance’, this book provides readers with a critical exploration of the interplay between surveillance and space.

SOCIETY AND SPACE
2016 • 208 pages
Cloth (9781473907768) • £75.00
Paper (9781473907775) • £24.99
What does the Society & Space series aim to explore?

Like the associated journal, this series is a place where people can explore the mutually constitutive relation of the spatial and the social. Books in the series examine themes from a theoretically sophisticated perspective, but work these questions through a range of contemporary and historical examples. As such it is interested by a range of contemporary and historical theories and theorists, but also to explore how this work can be used, critiqued and advanced.

As series editor, what is the main thing you hope readers will take away from these titles?

I think the books already published, and those in development, convincingly show that social and spatial relations cannot be dissociated, even though so much work is blind to the spatial. Migration, surveillance and violence – to pick just the topics of the books published so far – all need to be explored with a wide set of perspectives, as the authors convincingly show.

How do you see spatial and social studies as an interdisciplinary field of research developing in the next few years?

In a sense I hope to be surprised – one of the interesting things for me in the past few years has been a move back into a Department of Politics and International Studies, after eleven years in a Geography Department. There is a much wider attentiveness to spatial, geographical questions there than there was in the past, and interest in these questions is becoming evident across the social sciences, as well as in literature, history, philosophy and many other disciplines. This series aims to be part of those ongoing conversations.
SPATIAL REGRESSION MODELS

Second Edition

Michael D. Ward Duke University and Kristian Skrede Gleditsch University of Essex

Demonstrating the use of spatial analysis in the social sciences within a regression framework, the second edition of this text employs examples based on real data to illustrate the concepts discussed.

QUANTITATIVE APPLICATIONS IN THE SOCIAL SCIENCES

‘The editors have done a fantastic job. This second edition is really accessible to the student and provides the key literature in the key geographical terms of scale, space, time, place and landscape.’

- Dr Elias Symeonakis, Manchester Metropolitan University

Including ten new chapters on nature, globalization, development and risk, and a new section on practicing geography, this is a completely revised and updated edition of the best-selling, standard student resource. *Key Concepts in Geography* explains the key terms - space, time, place, scale, landscape - that define the language of geography. It is unique in the reference literature as it provides, in one volume, concepts from both human geography and physical geography.

Four introductory chapters on different intellectual traditions in geography situate and introduce the entries on the key concepts. Each entry then comprises a short definition, a summary of the principal arguments, a substantive 5,000-word discussion, the use of real-life examples, and annotated notes for further reading. Written in an accessible way by established figures in the discipline, the definitions provide thorough explanations of all the core concepts that undergraduates of geography must understand to complete their degree.

KEY THINKERS ON CITIES
Edited by Regan Koch Queen Mary University of London and Alan Latham University College London

Key Thinkers on Cities provides an engaging introduction to the dynamic intellectual field of urban studies. It profiles the work of 40 innovative thinkers who represent the broad reach of contemporary urban scholarship and whose ideas have shaped the way cities around the world are understood, researched, debated and acted upon. Providing a synoptic overview, the book spans a wide range of academic and professional disciplines, theoretical perspectives and methodological approaches.

YOUR HUMAN GEOGRAPHY DISSERTATION
Designing, Doing, Delivering
Kimberley Peters University of Liverpool

Completing a student project can be a stressful and complex process. This book breaks the task down into three helpful stages:

• Designing: Deciding on an approach, topic and research question, and ensuring a project is feasible
• Doing: Situating research and selecting the best methods for a dissertation project
• Delivering: Dealing with data and writing up findings

With information and task boxes, soundbites offering student insight and guidance, and links to online materials, this book offers a complete and accessible overview of the key skills needed to prepare, research, and write a successful human geography dissertation.

GLOBAL SHIFT
Mapping the Changing Contours of the World Economy
Seventh Edition

Peter Dicken University of Manchester

Global Shift is - quite simply - the definitive work on economic globalization. The extensive use of graphics, lack of jargon, and clear definition of terms has made it the standard work for the social sciences.

The Seventh Edition has been completely updated using the latest available sources. It maps the changing centres of gravity of the global economy and explains the global financial crisis. Each chapter has been extensively rewritten and new material introduced to explain the most recent empirical developments; ideas on production, distribution, consumption; and corporate governance. Global Shift provides:

- The most comprehensive and up-to-date explanation of economic globalization available, examining the role of transnational corporations, states, labour, consumers, organizations in civil society, and the power relations between them
- A clear guide to how the global economy is being transformed through the operation of global production networks involving transnational corporations, states, interest groups and technology
- Extended discussion of problems and institutions of global governance in the context of the global economic crisis and of the role of corporate social responsibility
- A suite of extensive online ancillaries for both students and lecturers, including author videos, case studies, lecture notes, and free access to specially selected journal articles related to each chapter.

LOCAL REGENERATION HANDBOOK

Andrew Maliphant The Community Works

The Local Regeneration Handbook meets the needs of today’s practicing ‘regeneration workers,’ broadly including anyone from regeneration partnership or development project officers, to housing association neighbourhood officers, parish counsellors, or other active local citizens, who all share a concern for the wellbeing of the community where they live or work.

STATISTICAL METHODS FOR GEOGRAPHY
A Student’s Guide
Fourth Edition

Peter A Rogerson University of Buffalo

‘In this fourth edition of what is now becoming a classic text, Professor Rogerson provides us with the most up-to-date and comprehensive treatment of basic statistics for geographers.’

- Stewart Fotheringham, Arizona State University

CONTENTS

2014 • 424 pages
Cloth (9781446295724) • £100.00
Paper (9781446295731) • £35.99
THE SAGE HANDBOOK OF NATURE
Edited by Terry Marsden Cardiff University

The SAGE Handbook of Nature provides a fully-comprehensive overview of the study of Nature and Natures; which positions Nature, the environment, and natural processes at the core of interdisciplinary social sciences.

March 2018 • 1744 pages
Cloth (9781446298572) • £400.00

THE SAGE HANDBOOK OF NEOLIBERALISM
Edited by Damien Cahill, Melinda Cooper, Martijn Konings and David Primrose all at University of Sydney

Across seven sections – including Neoliberal Economies, The State and Regulation, and Neoliberalism in Crisis – this resource brings together a global team of experts to explore the cutting edge of contemporary scholarship in the field.

February 2018 • 720 pages
Cloth (9781412961721) • £120.00

THE SAGE HANDBOOK OF HUMAN TRAFFICKING AND MODERN DAY SLAVERY
Edited by Jennifer Bryson Clark South Texas College and Sasha Poucki Rutgers, The State University of New Jersey

The SAGE Handbook of Human Trafficking and Modern Day Slavery provides a comprehensive, interdisciplinary and global look at the diverse issues surrounding human trafficking and slavery in the post-1945 environment. Covering everything from history, literature and politics to economics, international law and geography, this Handbook is essential reading for academics and researchers, as well as for policy-makers and non-governmental organisations.

CONTENTS
Part I: Defining Contemporary Slavery / Part II: Forms of Human Trafficking and Contemporary Slavery / Part III: The Context of Human Trafficking and Contemporary Slavery / Part IV: Interdisciplinary Approaches to Human Trafficking and Contemporary Slavery / Part V: Case Studies / Part VI: Ending Contemporary Slavery

November 2018 •
Cloth (9781473978553) • £120.00
The SAGE Handbook of Contemporary China

Edited by Weiping Wu, Columbia University, and Mark Frazier, New School University, New York

Contemporary China is dynamic and complex. This Handbook will define contemporary China Studies for the social sciences: investigating how we can best study China; exploring the transformations of contemporary China that inform how we study China; presenting the breadth and depth of the China Studies field; and identify future directions for China Studies.

July 2018 • 1201 pages
Cloth (9781473948945) • £265.00

The SAGE Encyclopedia of the Internet

Edited by Barney Warf, University of Kansas

The Internet has transformed how we seek information, communicate, entertain ourselves, find partners, and, increasingly, it shapes our notions of identity and community. This encyclopedia provides the most comprehensive collection of authoritative entries on the Internet available, written in a style accessible to academic and non-academic audiences alike.

Contents
Part I: Criminal and Ethical Facets / Part II: Economic Facets / Part III: Internet History and Governance / Part IV: Political and Legal Facets / Part V: Social, Behavioral, and Psychological Facets / Part VI: Technical Facets

May 2018 • 1064 pages
Cloth (9781473926615) • £315.00

The SAGE Handbook of Frankfurt School Critical Theory

Edited by Beverley Best, Concordia University Montréal, Werner Bonefeld, University of York, and Chris O’Kane, Portland State University

The SAGE Handbook of Frankfurt School Critical Theory expounds the development of critical theory from its founding thinkers to its contemporary formulations in an interdisciplinary setting.

June 2018 • 1553 pages
Cloth (9781473953345) • £400.00
CRITICAL THINKING
Your Guide to Effective Argument, Successful Analysis and Independent Study

Tom Chatfield

No matter whether they’re launching on their first degree or arriving as an international or mature student, Critical Thinking gives students the skills, insights and confidence to succeed. The Critical Thinking toolkit includes:

- 10 commandments videos – life rules to change how students think
- Smart Study boxes share practical tips to get their work into shape
- Quizzes to test their knowledge
- Space to scribble like a workbook so students really engage.

CONTENTS
