DOING QUALITATIVE RESEARCH IN A DIGITAL WORLD
Trena M. Paulus, Jessica N. Lester
While some qualitative methods texts touch upon online communities as a potential data source, show how to conduct interviews and focus groups online, or select recording devices and analysis software, no book to date has guided readers in the creation of a comprehensive digital workflow for their research. By working through each chapter in this book, readers will be able to generate a unique digital workflow for designing and implementing their research.

GENERALIZING THE REGRESSION MODEL
Techniques for Longitudinal and Contextual Analysis
Blair Wheaton, Marisa Young
This comprehensive text introduces regression, the general linear model, structural equation modeling, the hierarchical linear model, growth curve models, panel data, and event history models, and includes discussion of published implementations of each technique showing how it was used to address substantive and interesting research questions. It takes a step-by-step approach in the presentation of each topic, using mathematical derivations where necessary, but primarily emphasizing how the methods involved can be implemented, are used in addressing representative substantive problems than span a number of disciplines, and can be interpreted in words. The book demonstrates the analyses in STATA and SAS.

UNDERSTANDING CORRELATION MATRICES
Alexandria R. Hadd, Joseph L. Rodgers

Correlation matrices (along with their unstandardized counterparts, covariance matrices) underlie the majority of statistical methods that researchers use today. A correlation matrix is more than a matrix filled with correlation coefficients. The value of one correlation in the matrix puts constraints on the values of the others, and the multivariate implications of this statement is a major theme of the volume. Alexandria Hadd and Joseph Lee Rodgers cover many features of correlations matrices including statistical hypothesis tests, their role in factor analysis and structural equation modeling, and graphical approaches. They illustrate the discussion with a wide range of lively examples.

RASCH MODELS FOR SOLVING MEASUREMENT PROBLEMS
Invariant Measurement in the Social Sciences
George Engelhard, Jr., Jue Wang
Several decades of psychometric research have led to the development of sophisticated models for multidimensional test data, and in recent years, multidimensional item response theory (MIRT) has become a burgeoning topic in psychological and educational measurement. Considered a cutting-edge statistical technique, the methodology underlying MIRT can be complex, and therefore doesn’t receive much attention in introductory IRT courses. However author Wes Bonifay shows how MIRT can be understood and applied by anyone with a firm grounding in unidimensional IRT modeling. His volume includes practical examples and illustrations, along with numerous figures and diagrams. Brief snippets of R code are interspersed throughout the text (with the complete R code included on an accompanying website) to guide readers in exploring MIRT models, estimating the model parameters, generating plots, and implementing the various procedures and applications discussed throughout the book.

INDIGENOUS RESEARCH METHODOLOGIES
Bagele Chilisa
Author Bagele Chilisa updates her groundbreaking textbook to give a new generation of scholars a crucial foundation in indigenous research methodologies.

SCALE DEVELOPMENT
Theory and Applications
Robert F. DeVellis
This book presents complex concepts in a way that helps students to understand the logic underlying the creation, use, and evaluation of measurement instruments, and to develop a more intuitive feel for how scales work.
